What is a Commander GP?

The COMMANDER GP series was designed for General Purpose applications often used for pumps, fans, conveyors or any application where Open Loop motor operation was suitable. It was introduced in the USA around 1996 but manufacturing has been discontinued. The Commander GP was available in several models that could control 3-phase motors from 1 to 150HP. The input voltage ranged 208 to 230VAC or 380 to 480 VAC +/- 10% , three phase.
