What is a IMO Jaguar ?

The Commander series was a digital PWM AC motor speed control manufactured by Control Techniques from approximately 1986 to 1993. It was available in several models that could control 3-phase motors from 1 to 10HP and accept a line voltage of 380V to 480V +/-10%.

What replaces the IMO Jaguar ?

Except for those few applications whereby the Frequency Following function is being utilized or if serial communication is being used**, our Commander SK series can replace the IMO Jaguar series functionality. The Commander SK series offer many more internal features and can be setup using your Laptop PC. No pots to adjust or jumpers to set. Software for the Commander SK is free!

** If Jaguar has no wires on 20-23 nor pin 10, the Commander SK would be a fine replacement
